SUBJ: SAMPLING OF MIDDLEFIELD-ELLIS-WHISMAN WELLS LOCATED ON NAVAL AIR
STATION, MOFFETT FIELD, CALIFORNIA

This is to confirm the telephone conversation on 24 June 1988 between Mr. Bob Bostic, a Middlefield-Ellis-Whisman (MEW) representative, and Ms. Chlee Jue of my office concerning the Navy drawing and analyzing water samples from the MEW wells located on the Naval Air Station (NAS), Moffett Field. The MEW companies consist of three industrial companies, Intel, Raytheon, and Fairchild, which neighbor NAS Moffett and are enclosed by the Middlefield, Ellis, and Whisman streets. In 1986, Canonie Engineers, the MEW Companies Consultants, made a request to the Navy to place groundwater monitoring wells on NAS Moffett Field as part of their Remedial Investigation/Feasibility Study (RI/FS). Canonie Engineers received a real estate license from the Navy to place monitoring wells on NAS Moffett Field and proceeded drilling. Sampling results from the monitoring wells indicated that contaminants have migrated from neighboring industrial companies onto NAS Moffett Field property.

In March 1988, the Navy made a request to the MEW companies to sample the MEW wells located on NAS Moffett Field. The sampling and analysis of the water from wells would be beneficial to our RI/FS at Moffett Field.

During the telephone conversation of June 24, 1988, it was agreed to have Canonie Engineers unlock the wells and International Technology Corporation, the Navy consultant, draw and analyze the water samples. The Navy will pay for work performed by our consultant and the MEW companies will pay for Canonie's work. It was also agreed that, if either party was not satisfied with the sampling methodology, discussions will be held and an agreement will be reached before further sampling occurs. We anticipate sampling the wells from third calendar quarter 1988 to third calendar quarter 1989. A schedule of when and which wells will be sampled is being prepared and will be forwarded to you upon completion. We will coordinate with you and your consultant prior to the sampling. Because Mr. George Gullage, the MEW coordinator for the period May 1988 to October 1988, was not available during this phone conversation this arrangement was developed with Mr. Bob Bostic, a MEW representative.
